PROFILE

Full Stack Developer with 2+ years building production applications with an AI-first workflow. I use tools like OpenAI Codex and the Anthropic Claude API not just as assistants but as core parts of how I design, iterate, and ship — reducing development friction and delivering faster without cutting corners. I care about clean, maintainable code and solid architecture. I have shipped real-time financial dashboards, RESTful APIs, and conversational AI features. I thrive in fast-moving, agile teams where feedback loops are short and the work is visible.

TECHNICAL STACK

Frontend: React, JavaScript (ES6+), responsive design, component architecture, dashboard UI systems

Backend: Node.js, Next.js, Express, Java (Spring Boot), RESTful APIs, MVC/layered architecture, Convex

AI & Vibe Coding: Anthropic Claude API, OpenAI Codex, prompt engineering, conversational AI features, token cost optimization

Deploy & Tools: Vercel, Git (atomic commits), SQL

Testing: Playwright, Selenium

Current Focus: Advanced LLM integration · Conversational product architecture · Professional technical English

EXPERIENCE

Co-Founder & Full Stack Developer · [WillDevp](#)

April 2024 – May 2026

- ▶ Developed with an AI-assisted workflow throughout — using OpenAI Codex for code generation and iteration, reducing token consumption by ~50% and cutting repetitive boilerplate significantly.
- ▶ Designed a real-time executive financial dashboard (revenue, expenses, net profit, cashflow, MRR, invoices) using React + Convex with live subscriptions and optimistic updates.
- ▶ Built a modular analytics component library: FinancialKpiCard, AnalyticsChart, DateRangePicker, FinancialTrendBadge, RealtimeIndicator, and reusable dashboard hooks.
- ▶ Optimized Convex queries for financial aggregations with caching and lazy loading.
- ▶ Designed and developed RESTful APIs and backend services using Node.js/Express and Java (Spring Boot), applying SOLID principles, encapsulation, and Clean Code practices.
- ▶ Built React interfaces with clear separation between presentational and container components, delivering responsive and accessible products to real clients.
- ▶ Wrote technical documentation and onboarding guides to improve team collaboration and knowledge transfer.
- ▶ Participated in all stages of the development lifecycle: requirements gathering, user story refinement, and delivery in an agile workflow.

Freelance Full Stack Developer · [Independent Projects](#)

August 2024 – Present

AI-Powered Interactive Artifact (Claude API Integration)

React · Anthropic Claude API · Prompt Engineering

- ▶ Built a fully interactive AI-powered artifact inside Claude.ai using the Anthropic `/v1/messages` API — integrating Claude Sonnet as a real-time backend with stateful conversation management, system prompt engineering, and dynamic JSON rendering in React.

- ▶ Iterated on system prompts to control model behavior, output format, and conversational flow — a direct example of vibe coding in practice.

Healthy Recipe Recommendation App

Node.js · Express · SQL · REST API

- ▶ Built a full CRUD backend with personalized recommendation logic, parameterized queries, and data validation at the service layer.
- ▶ Designed a domain model with encapsulated classes and business methods for filtering rules and dietary conditions.

Perfume Catalog App

React · Component Architecture · Responsive Design

- ▶ Built a component-oriented React architecture focused on reusability, responsive design, and a polished user experience.

EDUCATION

Universidad Católica Luis Amigó

Medellín, Colombia

LANGUAGES

Spanish: Native · **English:** Intermediate — fluent technical reading and writing; verbal communication in active daily development
